Hello,

Herby I submit the comments in regard the draft *Auction rules on ensuring availability of natural gas at the transmission system interconnection with the storage in 2017 – 2018* .

In regard points 30, 31 and 32 of the Fulfilment of the Contract in the *Auction Rules* and point 3.5 of the *Contract on guarantee obligation for natural gas availability* :

Is the nomination/renomination (p.30) to be made in order to inject or to withdraw the gas from the Storage? In case of withdrawal the wording could be: *Nomination should be made at the entry point of the transmission system with the Storage* .

Network user should have possibility to take actions in order to keep its balancing portfolio in balance. Submitting nomination in regard the connection point between the Storage and the Transmission System should be made in combination with the nominations made in regard other interconnection points of the Transmission System.

The given time (30 minutes) is too short for closing a deal in regard volume change at any other entry or exit point. Especially if the nomination should be made in regard injection to the Storage.

Best regards,
Teet Eelmer
